Penny: pitch slide outline

Five minutes. Nostalgia is the hook, loneliness is only the stakes, connection is the payoff. For Misha to build the slides and script from.

Timeline

Time	Slide	Purpose
0:00–0:20	1. Title	Who we are
0:20–0:45	2. The question	Hook: nostalgia
0:45–1:20	3. The afternoon	Stakes: the problem
1:20–1:50	4. Meet Penny	The idea in one breath
1:50–3:00	5. Watch her play	**Demo: perception and adaptation (50% of the score)**
3:00–3:25	6. When she isn't sure	Critical failure mode
3:25–4:05	7. Teach her your game	Ambition, and the emotional payoff
4:05–4:25	8. How it works, on one laptop	Autonomy: offline, the numbers
4:25–4:45	9. Limits and next steps	Honesty and roadmap
4:45–5:00	10. Close	Callback to the opening
Spare	Residents	For questions only: “who is this for?”

Slide by slide

1 Title (0:00–0:20)

- **On the slide:** “Penny”, the tagline “Some games were never written down.”, team names.
- **Say:** almost nothing. Name, one line, straight into the question.

2 The question (0:20–0:45)

- **On the slide:** “Think of a game you played as a kid. One your family made up. Could you find it online today?”
- **Say:** ask it, pause for two seconds, then: “Probably not. Some games only live in people’s memories.”
- **Why:** it makes it personal for every judge within 20 seconds.

3 The afternoon (0:45–1:20)

- **On the slide:** a care home scene (image or simple illustration) and one supporting figure: about half of residents’ waking time is spent inactive or dozing (University of Kent).
- **Say:** Margaret (84, tremor, loved paper games, her family’s game is in no app) and Priya (fifteen residents, no spare hour). Loneliness gets one line at most, as the stakes. Say that Margaret and Priya are a composite.

4 Meet Penny (1:20–1:50)

- **On the slide:** three words: plays · learns · shares. Plus “her hands when yours won’t.”
- **Say:** she plays the classics on real paper, writes your moves if your hand shakes, learns your game, and passes it on. One sentence on why paper, not a tablet.

5 Watch her play (the most important minute) (1:50–3:00)

- **On the slide:** the one-minute video, or the live demo page if it's reliable.
- **Say:** narrate three moments: (1) what she sees: every square read from the paper, with confidence; (2) the sheet slides mid-stroke: pen up, finds the paper, finishes the line; (3) a hand reaches in: the arm freezes, then carries on. Point at the screen as each happens.
- **Why:** perception-driven action and adaptation to change are 50% of the score.

6 When she isn't sure, she asks (3:00–3:25)

- **On the slide:** "Is that where you meant to go?" and "language model understands · solver chooses · camera checks."
- **Say:** the worst failure is counting a move that isn't one, because ink is permanent. Explain the yes/no handling, and that the language model never picks a move.

7 Teach her your game (the emotional peak) (3:25–4:05)

- **On the slide:** the Footsteps board with the winning squares shaded, and "Margaret taught me this one."
- **Say:** Margaret explains her game; Penny asks what's missing, reads the rules back, draws the board, and works out the trick herself ("start in a corner or the middle"). A week later, Arthur learns it. Optional: a short teaching clip, labelled with how much it's sped up.

8 How it works, on one laptop (4:05–4:25)

- **On the slide:** sense, perceive, decide, act, plus three numbers: ~1 s to answer, 0.1 s to freeze, nothing sent to the cloud. MacBook Air M5, 24 GB.
- **Say:** keep it to 20 seconds; the technical summary has the detail.

9 Limits and next steps (4:25–4:45)

- **On the slide:** today: simulation, grid and paper games, English, she can't rub out, a carer loads paper. Next: paper roll, attachments for cards and board pieces, onboard computer (no laptop), the real SO-101.
- **Say:** say it plainly; the brief asks what it can't do, and honesty earns trust.

10 Close (4:45–5:00)

- **On the slide:** "Some games were never written down. Penny remembers them."
- **Say:** back to the afternoon: "Priya's still busy. But Margaret's game is in Penny's library now, and Arthur's learning it on Thursday." Then "Thank you," and stop.

Spare slide, for questions

Residents: Margaret (Penny writes for her), Arthur (writes his own marks), Doreen (a mix), Priya (the carer: "Penny doesn't replace me. She covers the hour I don't have."). Use it for "who is this for?" or "what if their ability varies?"

Before presenting

- Check which features really work on the day (persona files, "Margaret taught me this one", the unreadable-mark handling). For anything that doesn't, say "we're making it so that…".
- The numbers on slide 8 match Nakki's latest measurements on the demo laptop.
- Every figure on a slide has its source in small print (all in docs/evidence.md).
- Never claim Penny reduces loneliness or prevents dementia; say she gives residents something to do and something to share.
- Rehearse twice with a timer, including the hand-off to the demo.
